

PRESS RELEASE

June 7, 2012

Powers and Sons is proud to announce their involvement with the University of Michigan Formula SAE team. Formula SAE is a student engineering competition where students organize, manage and fund a racing team that will design, build and race an open wheeled prototype racecar.

The race season begins in the middle of May at Michigan International Speedway. In August, the team will be competing at the famous Hockenheimring in Germany.

Powers and Sons association with M-Racing will be technical as well as financial. A new steering system is being developed for the 2013 car. This gives our engineers an opportunity to work on a no-compromise steering system: It's not designed for 250,000 mile life. It's not designed to be produced in the hundreds of thousands per year. It's not designed to a maximum cost target. This system will strictly focus on efficiently translating steering wheel motion to road wheel angle in the lightest possible package.

This is an exciting program and Powers and Sons looks forward to a long association with the M Racing team.

Powers and Sons LLC is a leading OEM automotive supplier that offers complete full service design and engineering expertise for steering and suspension systems and products such as tie rod ends, pitman arms, track bars and drag links. We also supply the military industries with the same array of products.

Powers and Sons LLC has been in business since 1932 and has operations located in Montpelier and Pioneer Ohio as well as Juarez Mexico.
